# Science loves performance

We're building a piece of the future through products that defy the paradigms others simply stop at.

Tech-savvy, detail lovers, passionate about research facts and data, we rely on our in-house R&D lab, because innovation is at our core.

We try, and test, and design, and redesign, and sometimes actually fail. We aren't afraid of saying it, because true progress and true innovation is achieved through failure.

We are frank. Transparent. We let our products speak for us.

And we're always pushing forward, because science loves performance.

# Who we are

Out Of was founded in Italy by three brothers: Federico, with a degree with honors in Physics, Roberto, industrial designer, and Laura, graphic designer, and it was born from their deep passion for outdoor sports.

Our mission is to build a piece of the future through products that defy the paradigms others simply stop at. This is why we were able to create the impossible, like the award winning IRID® lenses, or the Piuma, the lightest sunglasses in world in their category.

Our constant strive to pursue innovation has brought us to achieve greater heights in 2024, securing three of the most prestigious awards in design and optics: the Red Dot Award, the German Design Award, and the Silmo d'Or.

This year, we also took a major step forward by becoming a certified B Corp, solidifying our commitment to social and environmental impact.

# Labs

Right across our offices our research and development labs make us  
able to follow any product from drafting to production, in-house.  
Reverse engineering, 3D scanning, quick 3D printing prototyping,  
electric welding, wave generator LC testing, luxmeter measurements.  
You name it. The labs are creativity's playhouse.  
When we say "we developed", we actually mean it.

# Tech overview

## IRIDI

Electronic lenses

The award winning instantaneously photochromic and battery free lenses

## THE ONE

Photochromic & polarized lenses

Photochromic and polarized to ride in any condition, always seeing well: now 67% more resistant

LENSES BY

Zeiss lenses

Amazing optical clarity, with premium Ri-pel oleophobic and hydrophobic treatment

## STORM

Storm lenses

Enhanced contrast in whiteout situations, to enjoy riding even in the toughest conditions

## Premium anti-fog

Premium anti-fog treatment

Second-to-none anti-fog coating to let you enjoy the sweatiest of ski days, fog free

IRID

Patented

The award winning electronic lens

# Instantaneously photochromic, electronic, without batteries

IRID's third-generation of lenses take adaptive tinting to the next level, transitioning between S1 and S3 tints in less than a second. With a reduced solar cell size—half of the previous version—it retains the same power and is still 100% waterproof and of course battery-free.

Technology available on:

Electra 3

Photochromic & polarized lenses

Chemically reacting to UV rays, photochromic lenses adjust their tint to light

providing the best light filter. Polarization selectively blocks horizontal reflections.

Reaction time: 15 seconds to 3 minutes. Perfect for slow light changes.

# Photochromic & polarized

**Now 67% more resistant**

A new mirroring treatment that is engineered to withstand plenty

of challenges. So resistant that passed the Q-UV test Cross Hatch -

Adhesive tape, for over 120 hours. Now on all The One lenses.

**Technology available on:**

Zenith      Void      Katana      Open

## Zeiss lenses

We trust no less than Zeiss for our base polycarbonate lenses. Arguably the most important lens producer in the world, Zeiss provides lenses that are almost unbeatable for optical clarity and overall quality. All our Zeiss lenses come with a premium Ri-pel treatment, oleophobic and hydrophobic treatment.

Available on:

Zenith      Void      Katana      Open

# Storm lenses

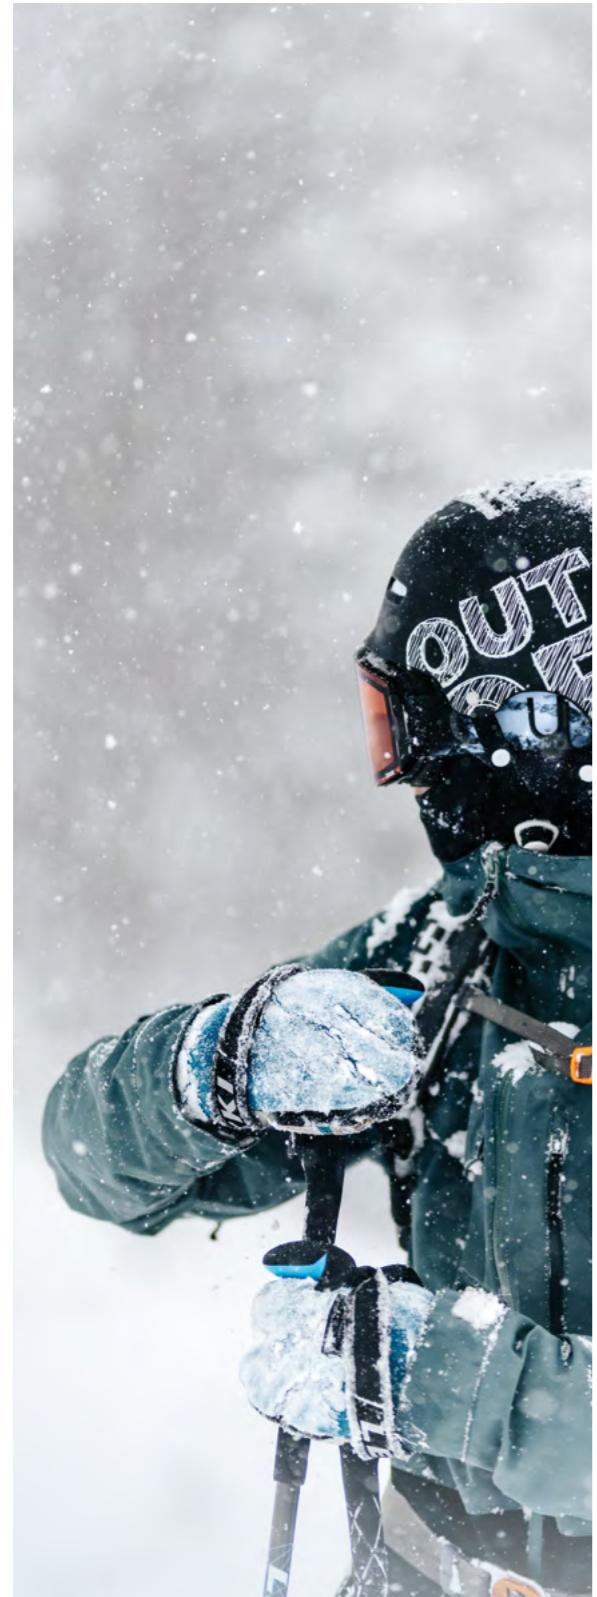

## Weather the storm

A contrast boost, right when you need it the most.

The Storm is specifically designed to improve the perception of shapes in whiteout conditions. Developed with professors from the faculty of Physics from the University of Milan and produced by Zeiss.

Available on:

Zenith      Void      Katana      Open

**5 times more  
anti-fog**

Compared to our main high end competitor.

Enjoy fog free ski days.

Now on all our lenses.

**Available on:**

All googles\*

\* excluded "Flat" model

# Everybody says their lenses are “super anti-fog”, but how “super” is “super”?

Last year we asked 43.000 people 1 simple question: “How would you like your ski goggles to be?”

Turns out that after all these years, the one thing that bothers 70% of the skiers and snowboarders who replied are foggy lenses that ruin amazing ski days.

So we went on a quest to find out who had the best anti-fog on the market. Even though the law EN166 requires lenses to take a test to be called “anti-fog”, and that this test gives out a precise number as a result, every brand hides behind exaggerating terms, but never discloses the actual results.

The test is simple: the lens is put inside a super humid environment and a machine controls how much time it takes for the lens to fog up. To define a lens as anti-fog, the law requires the lens to resist for more than 8 seconds. The higher the number is, the longer a lens resists, the better the anti-fog is.

Long story short, we developed a new performing anti-fog. But we didn't want to add our product to the sea of those crying “super anti-fog”, so we not only tested our lenses. We tested our competitors' lenses as well.

What we found (and since we've got nothing to hide on the right you can find the page from the official evaluation): our new anti-fog lasted over 300 seconds.

Fun fact? 300 seconds is the maximum time the test machine can run for, so we actually went beyond what the test thought possible!

“And the competitors?” You might be wondering... well, our new anti-fog tested to be more than 5 times more performing than our biggest (high end) competitor.

You can find the new super-performing, machine-beating, anti-fog on all our lenses.

**MK's collection**

# Electra 3

Forget light changes

Electra 3 redefines the concept of vision. The electronic IRID® lens automatically adapts to light conditions in less than a second, ensuring optimal darkness at all times. Extended field of view to 218°, for unrivalled performance.

# Slim tech, big impact

The third-generation curved and flexible solar panel integrates seamlessly with the lens. It is half the size yet delivers full power, and remains completely outside the field of vision, allowing you to benefit from all the advantages of the electronic lens without any drawbacks.

## See beyond the horizon

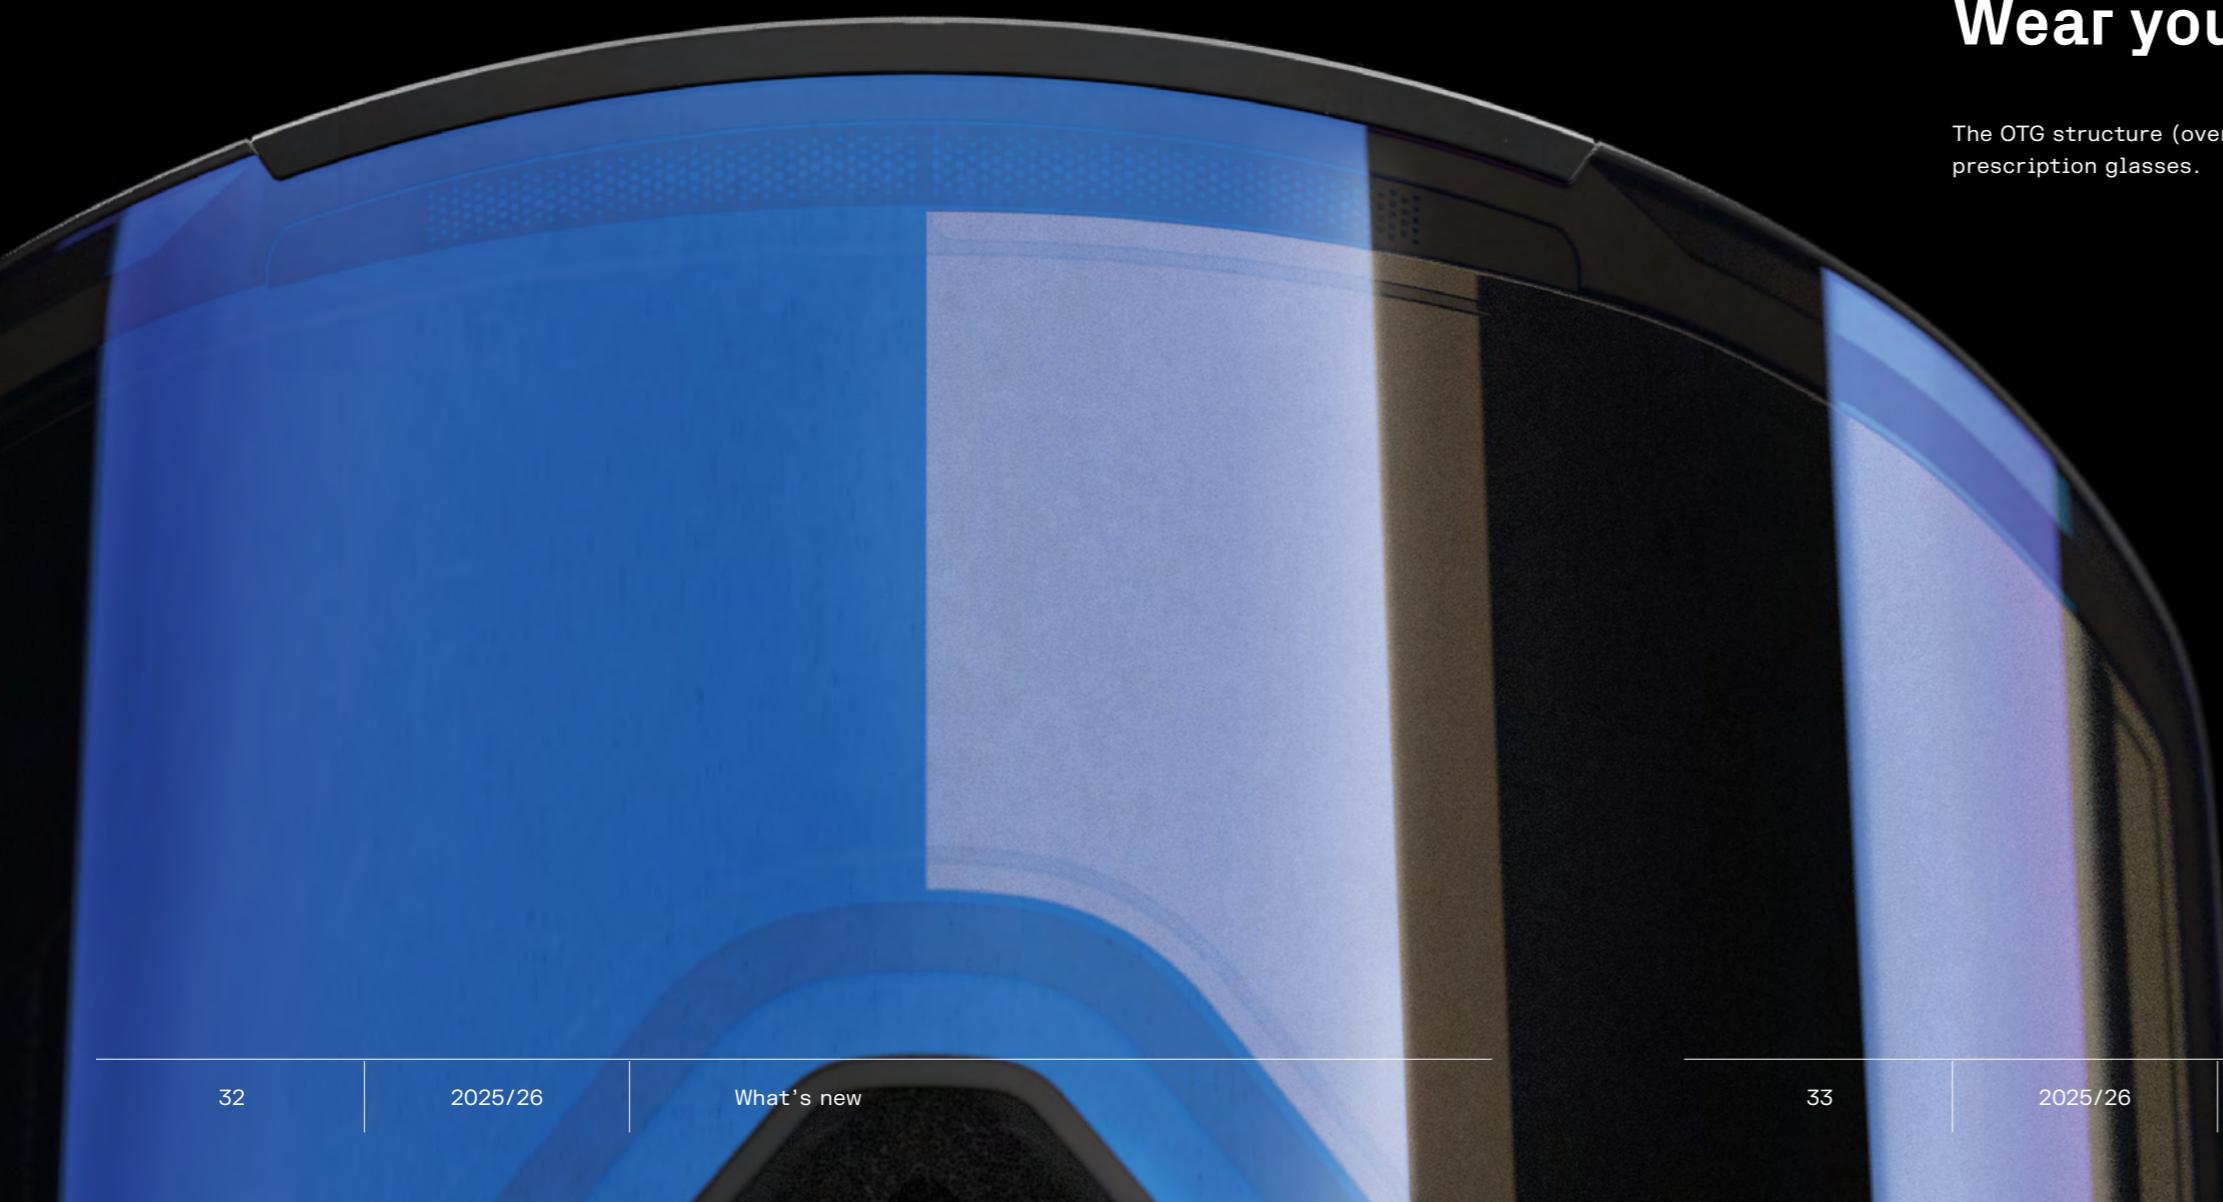

With a field of view extended up to 218°, peripheral awareness is maximized, improving environmental awareness for safer and more responsive performance.

## Anodized endurance

The anodized aluminum top plate, featuring the Out Of logo, extends beyond the frame, enhancing structural robustness and ensuring long-lasting protection.

## Wear your glasses

The OTG structure (over the glasses) allows for smooth use over prescription glasses.

# Zenith

## Lens swap in a snap

Zenith goggles make quick lens changing even easier with their hybrid magneto-mechanical one-handed system, safe even in the event of a fall. The unmatched 212° field of view provides incredible comfort at every run.

# One-hand lens swap

Thanks to the innovative design, lens changing can be done in a few seconds with one hand. Magnets draw the lens back to the frame, simplifying the operation even while wearing the goggles.

## Find your fit

Zenith is available in two sizes, M and L, to provide the best fit to anyone.

## Hybrid lens change system

The hybrid quick lens change system combines magnets and mechanics, enabling easy lens replacement in seconds. This technology ensures safety even in the event of a fall, preventing accidental loss of the lens.

## See beyond the horizon

The field of view is optimized with a 212° angle at the bottom of the lens. The tilted periscope angle provides greater visibility to crucial areas.

## Wear your glasses

The OTG structure (over the glasses) allows for smooth use over prescription glasses.

## The silver touch of Team Mirgor

The lens features a silver band along the upper edge, achieved through a selective dual-mirror process specifically designed to create the silver effect on the lens without compromising its central visibility. The "Out Of" logo is seamlessly integrated as a cutout within the band, allowing the color of the underlying lens to subtly show through.

## Marcus Kleveland: The king of slopestyle

We are proud to present the exclusive collaboration with Marcus Kleveland, an undisputed icon of slopestyle and a symbol of innovation in the world of snowboarding. **This unique collection combines our cutting-edge technology with Marcus's iconic style, creating a graphic that merges our logo with a crown featuring his initials, MK.** A tribute to the "king of slopestyle," this design represents not only excellence and leadership, but also the perfect blend of innovative design and technical performance.

## Bio based ski goggles

## Bio project

Frame made with Pearlthane™ Eco TPU.

Rigid parts (buckles and lens' frame): RILSAN® CLEAR G 850 Rnew.

Microfiber pouch and elastic band: recycled.

Made in Italy. Suitable for medium to wide faces.

Available with Zeiss lenses.

## Our line of bio based ski goggles

As a B-Corp our mission is to create products that are not only technically amazing, but that impact in a positive way the world and the people we come across. Bio project, our line of bio-based ski goggles, is our act of change.

Both the elastic band and the microfiber pouch are made with recycled textiles with the GRS (global recycled standard) certification.

### Frame: PEARLTHANE™ ECO TPU

Pearlthane™ is a renewable source-based TPU. The renewable part is extracted from castor oil and the end material contains up to 46% of bio-based material. Castor oil, known since the 2000 B.C., is obtained by squeezing the seeds of the Ricinus communis plant. Furthermore, Pearlthane™ performs even better than non-bio based TPUs since it maintains a better flexibility at low temperatures.

This is a beginning, a first step towards products that don't put our winters and our beloved outdoors at risk, without compromising on performance, durability and looks that are always at Out Of's core. Combining bio-based materials to products that are meant to be repaired and restored, rather than thrown away at the first sign of aging, we can truly start making an impact.

### Rigid parts (buckles, lens's frames): RILSAN® CLEAR G 850 Rnew

Is a high performance copolyamide specifically designed for high end optical frames, that contains up to 51% of renewable carbon.

### Microfiber pouch and elastic band: recycled

# Liner helmet

Only 360 grams (size M), versatile helmet. Perfect for both park and backcountry days.  
Fidlock Magnetic buckle. 3-steps inner padding height regulation, fit adjustment wheel. Optimized ventilation flow and removable internal padding.

**Fidlock buckle**

Easy-to-use locking system.

**Ventilation system**

The superior air inlets are connected internally to a network of cuts in the foam that allow the air to run across the head and to flow out the helmet backwards.

**Fit adjustment wheel****Earpads in breathable material**

A refined holes pattern to guarantee air and sound flow.
